SECURITY ASSESSMENT REPORT

Linux Practice

REPORT ID	AZ-EH-2026-001
VERSION	1.0
ASSESSMENT DATE	20/10/2026
REPORT DATE	22/10/2026
PREPARED BY	Ammar Alzaiem
CLASSIFICATION	Public

What I did

- Created two groups, `lab1` and `lab2`.
- Created three users: `ammar1`, `ammar2`, and `ammar3`.
- Added users to groups using `usermod`.
- Created `/Shared-folder` and applied group ownership and permissions.
- Used `find` to search for files and directories.
- Inspected running processes with `ps aux`.
- Inspected listening sockets with `ss -tuln`.
- Checked network interfaces with `ip addr`.
- Checked disk space and memory with `df -h` and `free -h`.
- Checked the running kernel and system date with `uname -r` and `date`.
- Configured a cron task to append timestamps to a log file and checked the resulting log.

Commands used

Command	**Purpose**
`groupadd`	Creates a group
`useradd`	Creates a user account
`usermod`	Changes group membership
`mkdir`	Creates the shared directory
`chown`	Changes directory ownership
`chmod`	Sets directory permissions
`ls -ld`	Displays directory metadata and permissions
`pwd`	Prints the current working directory
`ls -la`	Lists directory contents, including hidden files
`find`	Searches for files/directories by criteria
`crontab -e`	Edits the user's scheduled tasks
`cat`	Displays a file's contents
`ps aux`	Lists running processes

Command	Purpose
`ss -tuln`	Lists listening TCP/UDP sockets without resolving names
`ip addr`	Displays network interfaces and addresses
`df -h`	Reports filesystem space in readable units
`free -h`	Reports RAM and swap usage
`uname -r`	Prints the kernel release
`date`	Prints the system date and time

The first eleven commands are visible in the screenshots; the final seven system inspection commands are also present in the captured terminal transcript.

Key learning

This exercise connected Linux administration commands to practical tasks: managing accounts and group access, setting shared-directory permissions, finding files, checking system activity, and automating a recurring task with cron. I also learned to keep terminal output and screenshots as evidence so that the steps can be reviewed later.
