SECURITY ASSESSMENT REPORT

Weekly week report

REPORT DATE	22/10/2026
PREPARED BY	Ammar Alzaiem

Overview

This week focused on building practical foundations for cybersecurity work. I completed TryHackMe learning activities, practised Linux command line skills through OverTheWire, configured users and groups on Ubuntu, And documented 30 Linux commands, and worked on a virtual lab setup and network documentation.

Work Completed

- TryHackMe rooms: Worked through foundational rooms covering networking, Linux, and cybersecurity concepts. The goal was to strengthen core knowledge.
- OverTheWire Bandit (levels 0–10): Practiced navigating a Linux environment and solving beginner command line challenges. This reinforced the use of commands and techniques for locating files, reading data, and understanding basic shell workflows.
- Ubuntu users, groups, and permissions: Practiced creating three users and two groups, and setting up a shared directory with appropriate permissions. This connected Linux account management with practical access control concepts.
- Linux command documentation: Prepared a reference of 30 Linux commands, recording what each command does and when it is useful.
- Virtual lab setup and network map: Worked on a lab involving Kali Linux, Ubuntu, and a Windows evaluation VM, with the machines intended to communicate on a shared virtual network. Documented network details and worked on a network diagram.
- LinkedIn update: Prepared a post to share progress and key learning from the week.

Skills Practised

Linux command line navigation and file handling.

User and group administration, permissions, and shared folder access.

Basic networking concepts and VM network configuration.

Problem solving through guided command line challenges.

Technical documentation, lab notes, and professional communication.

5. Challenges and Lessons

The work involved switching between learning, hands-on practice, troubleshooting, and documentation. A key lesson was that lab work is more valuable when the setup and takeaways are recorded clearly enough to repeat later.
