SECURITY ASSESSMENT REPORT

Lab Setup

REPORT ID	AZ-EH-2026-001
VERSION	1.0
ASSESSMENT DATE	22/10/2026
REPORT DATE	22/10/2026
PREPARED BY	Ammar Alzaiem
CLASSIFICATION	Public

Tools Used

- `ip a` : Displays network interfaces and IP addresses on Linux.
- `ping` : Tests connectivity between devices.
- `traceroute` / `tracert` : Shows the network path packets take to a destination.
- `Nslookup` : Queries DNS to resolve domain names into IP addresses.
- `Ipconfig :` Displays detailed network configuration on Windows.

What I Learned

The results helped me understand how virtual machines communicate over a virtual network. The ping test checked reachability, while traceroute showed the path packets followed. DNS queries demonstrated how domain names are translated into IP addresses.

I learned how to inspect network settings, test connectivity, examine routes, and verify DNS resolution. These are useful first steps when troubleshooting network issues and preparing a virtual lab for cybersecurity testing.
